

Jonas De Decker

successfully completed the SITRAIN access course

S7-1500R/H - High Availability (TIA Portal V17)

on 17-OCT-2024.

Duration of the course: 00:25 Hrs

Main subjects of the course:

- What is high availability and how can redundancy be used to increase the availability of an automation system?
- In which industries is high availability essential?
- How can the availability of the individual levels of an automation system be increased?
- How do the redundant systems supplement the S7-1500 family and how easy is the engineering?
- Differences between an R and an H system and which PLCs and accessories are available
- Basic configurations of R and H systems and their field level
- Redundant connection of I/O systems by means of PROFINET system redundancy
- The behavior of S1 and S2 PN IO devices assigned to a redundant system and which S2 devices are currently offered by Siemens
